Infection Control and Public Health Weekly Meeting Minutes Thursday, December 12 | 12:30 – 1:00 pm

Region 8 Syphilis Update (Todd Rademaker and Jacob Henderson) attached PowerPoint.

Reports available at https://hamiltoncountyhealth.org/reports/

Respiratory Season

- ODH Health Advisory regarding an increase in respiratory pathogens, including *Mycoplasma* pneumoniae and *Bordetella pertussis*.
- Overall respiratory virus activity remains low in US but cases of RSV and influenza are rising.
- National and state increase in Mycoplasma infections, particularly in schools and childcare settings.
- Pertussis cases have also returned to pre-pandemic levels
- Percentage of ED visits for respiratory illness reached 3.2%, which is above baseline levels and reflects an ongoing increase in flu-related cases.
- Public health labs report <u>266 influenza A</u>, with 73 of those influenza A(H1N1) pdm09 and 124 A(H3N2) and <u>6 influenza B</u>.
- No new pediatric flu deaths were reported in the most recent reporting week, keeping the new season's total at two (206 pediatrics deaths for 2023-24 flu season)
- Seasonal influenza activity is increasing slightly among children but remains low nationally.
- RSV activity is elevated and continues to increase in the southern, central, and eastern United States, particularly in young children.
- Ohio is experiencing low influenza-like illness activity and moderate overall respiratory illness activity.
- Flu trends for the Southwest Ohio region can be reviewed through Hamilton County Public Health's influenza dashboard, linked here: https://hamiltoncountyhealth.org/influenza-report/.

USDA Testing H5N1 in Milk (Dec 16)

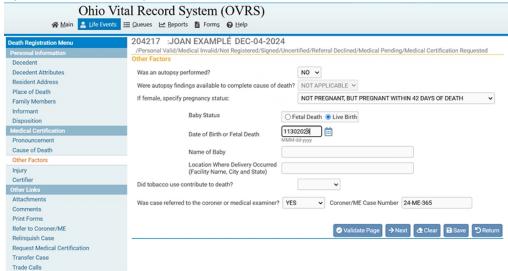

- No human illnesses have been linked to raw milk products to date, pasteurization process disables the virus.
- proteins on the H5N1 surface correspond to receptors found in many bird species.
- Study this week found a single mutation in the virus may enable human-to-human transmission.
- Globally, fewer than 500 human deaths have been linked to H5N1 since 2003.

Unidentified Flu-Like Illness in Democratic Republic of Congo (DRC)

- Outbreak of an unknown disease centered in Kwango province with at least 400 cases and up to 143 deaths since late October (most deaths age 15-18).
- Nearly half the cases are in children under 5.
- Flu-like symptoms, including fever, headaches, nasal congestion, coughing, breathing difficulties, and anemia.
- Pathogen remains unknown (possible zoonotic)

Ohio Vital Record System (OVRS) ... January 1

- Registrar training on ODH YouTube Channel
- Replacement for EDRS for death certificates
- Only MD or DO can certify an Ohio Death

PrEP Training for Clinicians (Jan 23) Jaasiel Chapman

- Virtual, facilitated by Dr. Corky Lehmann, CCHMC
- From how to start the conversation to medications options and monitoring
- CDC guidelines recommend PreP for HIV-negative sexually active adults and adolescents and persons who inject drugs at substantial risk of acquiring HIV infection.

The <u>2025 Immunization Schedules</u> approved by Advisory Committee on Immunization Practices (ACIP) and adopted by the CDC Director on Oct. 24, 2024, are now available: <u>Adult Immunization Schedules</u> 2025; Child and Adolescent Immunization Schedules 2025.
