

## Wood Destroying Insects, Beetles, Carpenter Ants, and Bees

9:00am – 9:55 am

This session will cover your Wood Destroying Insects: Beetles, Carpenter Ants, and Carpenter Bees. During each discussion we will discover the biology, inspection, and ways to control and prevent such Insects.

### Presented By: John Singletary, Nisus Corporation

John holds an Associated Certified Entomologist certification and is the Northeast Territory Manager for Nisus Corporation. John's responsibilities include educating and training PMPs on protocols and practices that address pest issues that are of consequence to the overall public health as well as WDI (Wood Destroying Insects) that can cause structural and property damage. His responsibilities also include instruction on and identification of WDOs (Wood Destroying Organisms) molds and fungi, that can cause structural damage as well as be a danger to the overall public health. Through this instruction and education John guides PMPs to remedial and preventive measures using Nisus Corporation's product selection as well as other options in the market to include IPM methods. He has over 13 years of experience in the Pest Management industry conducting site evaluations, service sales and technical training to include LEED program implementation. John's experience includes work in the service, distribution and manufacturing sectors of the Professional Pest Control industry. John provides regular in-house and virtual training and guidance for clients and Associations, with continuing education and technical updates.
