January 2011

Re: J-Code assigned for ISTODAX® (romidepsin) for injection: J9315

Dear Physician Network, State Society, Payer, Distributor or
Association of Community Cancer Centers,

A product-specific billing code or J-Code for ISTODAX has been established and will be effective on January 1, 2011.

The new product-specific J-Code for ISTODAX is:

• **J9315, injection, romidepsin, 1 mg**

The new J-Code, J9315 for 1 mg of ISTODAX, replaces any temporary or miscellaneous codes under which ISTODAX is currently reimbursed.

Please note that for billing purposes, 1 mg equals 1 billable unit. ISTODAX is supplied as a kit including a sterile, lyophilized powder in a single-use vial containing 10 mg of romidepsin active ingredient. As such, 10 units of J9315 describes a single-use vial of 10 mg.

There is an updated reimbursement guide available through Celgene Patient Support®.

Please share this information with the appropriate personnel. If there are any additional questions or concerns regarding the contents of this J-Code update, please call Celgene Patient Support® at 1-800-931-8691, 8:00 AM – 7:00 PM EST, Monday through Friday.

Sincerely,

A handwritten signature in black ink, appearing to read "John Chin", with a stylized flourish at the end.

John Chin
Executive Director, Marketing
Celgene Corporation
