OVERVIEW

Join us for the **APRN/PA Pharmacology Summer Conference!** **In-person attendance is preferred for local attendees to facilitate networking with colleagues and engagement with industry sponsors.**

The conference will close the gap in pharmacological care for advanced practice providers managing diseases and symptoms in a constantly changing healthcare environment.

TARGET AUDIENCE

The educational activity is intended for APRNs and PAs.

OBJECTIVES

- Recognize medications and substances that can potentially lower the seizure threshold.
- Understand common drug–drug interactions involving anti-seizure medications.
- Review commonly asked questions when taking care of patients with epilepsy.
- Review mechanism of action of factor XI inhibitors.
- Describe the potential role of asudexian to reduce the risk of stroke recurrence.
- Explain the historical use of pregnancy risk categories and why they were replaced.
- Describe how and when medications may cause fetal or neonatal effects.
- Recognize pharmacokinetic factors that influence the transfer of medications across the placenta and into breast milk.
- Discuss trusted resources available to evaluate the safety and efficacy of medications in pregnancy and lactation.
- Identify basic components of the human immune system that play an important role in how clinicians use immunosuppressive therapy to promote graft tolerance.
- Understand the six major categories of transplant pharmacology to include the use, side effects and potential adverse effects of each medication.
- Recognize additional medications that may be needed for special populations.
- Apply the pharmacologic mechanisms of the four pillars of guideline-directed medical therapy (GDMT) to optimize initiation and titration in heart failure.
- Evaluate clinical trial evidence supporting the four GDMT pillars to guide shared decision-making and improve cardiovascular outcomes in heart failure.
- Understand the etiology and common causes of hypothyroidism and its treatment options.
