

Professional Development Committee

The Professional Development Committee aims to provide a quality Environmental Health Fundamentals Course (aka *the SIT Class*) to new Sanitarians during AEC. This course covers most aspects of Environmental Health and is designed to prepare our newest Sanitarians for their future careers. In addition, in 2017 the Environmental Health Leadership Institute was offered aimed at developing Environmental Health leaders throughout the State. This course focused on areas such as staff development, CQI, public information, and budgeting.

The majority of our committee communication is by phone or email. We welcome any OEHA member to join our committee, or you may send one of us an email if you have a great idea that may help.
