Join us at the

14th Annual
**Surgery of the
Foregut Symposium**

February 15 – 18, 2015

The *14th Annual Surgery of the Foregut Symposium* will provide surgeons and other health care professionals a wide range of information related to new and well established topics in gastrointestinal surgery. Attendees will become familiar with surgical aspects of conventional, laparoscopic, robotic, and endoscopic surgery of the foregut. In addition, attendees will acquire in-depth information related to the diagnosis and management of disease processes of the esophagus, stomach, duodenum, liver, and biliary tree.

The program will review complex case scenarios and complications after foregut procedures. Abdominal wall hernias, fistulas and the use of the vacuum assisted closure (VAC) will be presented. Attendees will have the opportunity to analyze the management of complications including anastomotic leak and enterocutaneous fistulas and review complex techniques utilized by experts for conversions, revisions, and reversals of bariatric procedures.

2nd Annual
**International Congress
of Fluorescent Guided
Imaging Surgery**

February 14, 2015

The *2nd Annual International Congress of Fluorescent Guided Imaging Surgery* is focusing on the new era of research on near infrared (NIR) imaging. The concept is based on the utilization of infrared light as a tool to guide surgery. This unique course will offer an updated and better understanding of the novel technique. Our goal is to foster the exchange of information and ideas on fluorescence imaging and its applications in surgery.

Attendees will have the opportunity to meet worldwide leaders in near infrared techniques and view their presentations live. Biliary tract, new approaches in cancer stratification by using NIR imaging on sentinel lymph nodes, prevention of anastomotic leaks with perfusion testing, and tumor margins and localization are some of many topics that may capture your interest.

OBJECTIVES

At the end of this educational activity the participants should be able to:

- Differentiate treatment options of hepato-bilio-pancreatic disorders
- Categorize alternative diagnostic and surgical management of disease processes of the esophagus, stomach, and duodenum
- Identify best diagnostic and treatment modalities for gastroparesis
- Diagnose and manage long term bariatric surgery complications
- Analyze fluorescent guided imaging surgery

WHO SHOULD ATTEND
