

Medications Containing Aspirin (Acetylsalicylate) and Aspirin-Like Products

Epidemiologic research has shown an association between the development of Reye's Syndrome and the use of aspirin-type products for treating symptoms of influenza-like illnesses and chicken-pox. The National Reye's Syndrome Foundation, U.S. Surgeon General, the Food and Drug Administration, and Centers for Disease Control and Prevention recommend that aspirin and combination products containing aspirin not be given to children or teenagers who are suffering from one of these illnesses. This listing shows products containing aspirin or salicylate compounds. **THIS IS NOT A COMPLETE LIST!** Some medication labels may use the words acetylsalicylate, acetylsalicylic acid, salicylic, salicylamide, phenyl salicylate, etc., instead of the word aspirin. There is not data as to other forms of salicylate other than aspirin associated with the development of Reye's Syndrome, but until further research has answered this question, we recommend products listing these substances not be used at all in children and adolescents, because a virus may already be present before symptoms appear. Product ingredients may be reformulated periodically, so always check the label. When in doubt ask your doctor or pharmacist.

NON-PRESCRIPTION PRODUCTS

Alka-Seltzer*	Bayer
Anacin*	Whitehall Robins
Ascriptin*	Novartis
Bayer Aspirin*	Bayer
BC Powder*	Block
Bufferin*	Bristol-Myers
