Structure

- Assess the performance of clinical ultrasound transducers
- Assess the performance of clinical ultrasound transducers for pre-clinical imaging
- Assess the performance of commercially available pre-clinical transducers

Of Mice and Men

- Experimenting on humans frowned upon
 - Alternatives
 - Nematode worm
 - Insects
 - Fruit fly
 - Fish (zebra fish)
 - Mammals
 - Mice
 - Rats
 - Pigs
 - Sheep
 - Primates

Objectives of Genetic Engineering

- Understand human disease processes
- Develop treatments and cures

Manipulating the Genome

- Natural mutations
- Chemical mutagenesis
- Knockout approach
 - Stop an existing gene from functioning
 - Random / Targeted
- Transgenic approach
 - Incorporation of a foreign gene into the genome of the target organism

Mouse Models

- Cancer
 - *Brain*
 - *Melanoma*
- Obesity-diabetes
- Polio
- Birth defects
 - Cleft pallet
 - Spinal defects
- Emphysema
- Cystic Fibrosis
- Sickle cell disease
- Glaucoma
- Parkinson's Disease
- Deafness
- Cardiology
- Alzheimer's
- Drug testing
- Baldness
- etc

Characterisation

- Genotype
 - "internally coded, inheritable information"
 - The blue print for construction and maintenance of living organism.
- Phenotype
 - Describes the physical attributes of the organism
 - Atoms, molecules, cells, structures, metabolism, energy utilisation, tissues, organs, reflexes.

Spot the Difference

Results of genetic changes may
be -

obvious

or

may not

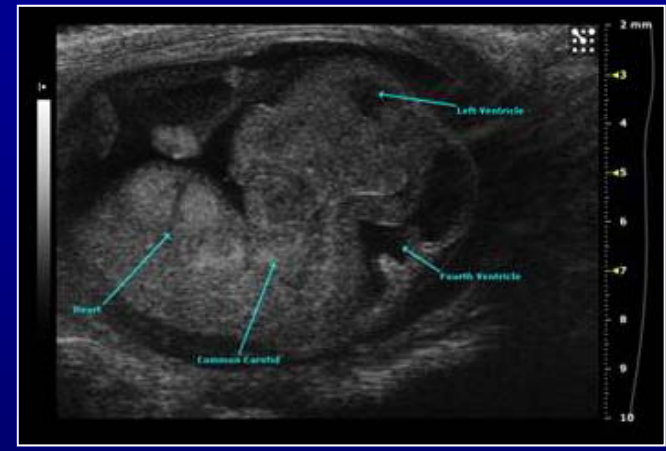

Phenotyping Methods

- Biochemical
- Behavioural
- Imaging
 - (Serial studies)

Ultrasound Scanners

- Real-time
- High frame rate
- High resolution
- Portable
- Safe
- Convenient
- Moderate cost

Conclusions

- Using the Edinburgh Pipe Phantom we are able to quantify the performance of clinical and high resolution, pre-clinical ultrasound scanners.

Advantages as Experimental Subjects

- Mice are easy to look after
 - Inexpensive
 - Large numbers – small space
- Short life cycle
 - High reproduction rate
 - Sexual maturity 6 weeks
 - Gestation 19 days
 - Disease often appears within 4-6 weeks

Many Differences

- Mouse
 - Small
 - 4 legs & a tail
 - Whiskers
 - Communicate in ultrasonic range
 - Naturally athletic
 - Can jump 1m
 - Climb almost anything
 - Relatively short life
 - 1-3yrs

Looks can be Deceiving

- Similarities
 - Eyes
 - Ears
 - Hair
 - Internal organs
- Genes
 - Only 150 of 30,000 not in common
- Genome relatively easy to manipulate
